Solving two steps linear equations with single variable

1) $8 = \dfrac{x}{4} + 2$

2) $-6 + \dfrac{y}{4} = -5$

3) $9a - 4 = -8$

4) $0 = 4 + \dfrac{b}{5}$

5) $-4 = \dfrac{c}{10} - 5$

6) $-2 = \dfrac{15 + m}{3}$

1) $8 = \dfrac{x}{4} + 2$

x = 24

2) $-6 + \dfrac{y}{4} = -5$

y = 4

3) $9a - 4 = -8$

a = -9/4

4) $0 = 4 + \dfrac{b}{5}$

x = -20

5) $-4 = \dfrac{c}{10} - 5$

c = 10

6) $-2 = \dfrac{15 + m}{3}$

x = -21
